

Flip Book Instruction

1. Software operating environment:

Software runs on Windows platform, the system must be Windows7 or above. Internal Memory 4G or above. Hard disk 60 GB or above.

2. Picture design:

A picture consists of two pages, as picture shown below, if the projection resolution is 1920x1080, then the resolution of a single picture is 960x1080. Similarly, if the projection resolution is 1280x800, then the resolution of a single picture is 640x800. the rest can be done in the same manner. The minimum number of pictures is 2. It must be an even number.

3. Operation step:

- (1) Put the designed picture into the D:\MYT\Image path; if don't have this path, you need to manually create this path;
- (2) Images are loaded in name sort order, we recommend to name it 0001.jpg or 0002.jpg;
- (3) Open the program and wait for the image to load;
- (4) After debugging infrared capture, you can flip the page by waving above the projection.
